Cox IP Address Request Form - End-User

The Cox IP Address Request Form End-User is to be completed when Cox customers wish to request address space to be used in conjunction with Cox Internet services. Please review the Cox IP Address Allocation and Assignment Policy before completing this form to ensure your request is consistent with those policies.

Please complete all fields and return to your Cox Business Sales Engineer.

Business Information
Name of business ____________________________
Address ____________________________________

Technical Point of Contact (POC)
Name (Last, First) ___________________________ Title ___________________________
Address ____________________________________
Phone (daytime) ___________ (after hours) ___________ E-Mail ___________________________
ARIN_Org_ID ________________

Request
Initial request (Y/N) ________ Prefix length _____________ Number of blocks ________
Previously assigned addresses (if any) ____________________________________________
Utilization of previously assigned addresses Number of hosts ________ Number of subnets ________
Subnet mask(s) ________________________________________________________________ Use NAT/PAT (Y/N) ________
Contiguous block required (Y/N) ________ If Yes, customer agrees to renumber existing hosts (initial) ________

Justification
List upstream providers and peers ________________________________________________
List all IP address blocks in use in your network today __________________________________
Briefly describe the products and services your company offers __________________________________
Provide a complete numbering topology detailing how you currently utilize both public and private IP addresses

Cox IP Address Request Form – End-User Instructions

Business Information
Provide your organization’s legally registered business name and complete address

Technical POC
Complete as indicated. Enter a registered ARIN Org ID. If you are unsure of your Org ID, please search for your organization’s name in ARIN’s WHOIS database. Go to www.arin.net.

Request
Indicate whether this is an initial request for IP space (yes or no). If yes, only /26 IP address requests or larger need be requested via this form. If no, please list your IP address request via one of the following prefixes: IPv4 /29, /28, /27, /26, /25, /24, or /23; IPv6 /52 or /48. Indicate the number of blocks you are requesting.

If you have previously been assigned IP address space from Cox, please list those addresses in CIDR notation. For example, 192.168.100.1/24 represents the given IPv4 address and its associated routing prefix (192.168.100.0) or, equivalently, its subnet mask, 255.255.255.0. Also indicate the number of hosts and subnets, and the subnet masks in use with the Cox IP block(s) you currently are assigned. Please indicate whether you currently employ NAT/PAT technology in your network.

Do you require a contiguous IP address block, combining any previous IP address assignments with the IP address block outlined in this request? If yes, a separate contiguous IP address block may be assigned by Cox, provided you agree to renumber your existing hosts to the new IP address block and return all current IP address assignments to Cox. Please provide your initials in the space provided indicating acceptance of this requirement. If you do not require a contiguous IP address block, Cox may fulfill your request with any IP address block that satisfies this request.

Justification
List all networks from whom you purchase transit or with whom you exchange peering information. You may list these as organization names or AS numbers.

Indicate all IP address blocks in use in your network today. The IP address block(s) in this field should be explicitly reassigned or registered to you in ARIN’s WHOIS database or a public RWHOIS server. You may also list private IP addresses in use in your network if they are relevant to your request for public IP addresses.

Briefly describe the products and services your company offers.

Please provide a comprehensive numbering topology, accounting for every IP address in use in your network today. Cox will use this data to determine if you meet the minimum criteria for requesting IP address block(s) from Cox.

Indicate how much additional IP address space you project to use in your network during the next twelve months. Please express your needs as either a raw number or in units of /24.

Use this section to provide additional information to Cox. If you are attaching any supporting documentation, please indicate this here.

Please review the Cox IP Address Allocation and Assignment Policy before completing this form to ensure your request is consistent with those policies.

The Cox IP Address Allocation and Assignment Policy is based on the Internet Registry IP Allocation Guidelines (RFC 2050) and the American Registry for Internet Numbers (ARIN) guidelines for ISPs. These guidelines were developed to meet the needs of the larger Internet community in conserving scarce IPv4 address space and to allow continued use of existing Internet routing technologies. Notwithstanding, Cox may allocate and assign IP addresses in any manner in which Cox determines, at its sole discretion, is reasonable for the operation of its Internet business. Cox reserves the right to deny any IP request Cox deems inappropriate or inconsistent with its current policies.
