

Galaxy S26 Ultra top features

Privacy display

- Privacy screen on Galaxy S26 Ultra makes the screen less visible when viewed from a side angle. Designed for sensitive apps, like online banking, users can turn it on when they need it or set conditions for turning it on automatically when users open specific apps.

Circle to Search 3.0

- With the latest version of Circle to Search, AI scans the entire screen and recognizes each element, helping users shop the look, instantly discover product details, explore matching items and find inspiration for their next outfit or setup.

Photo Assist

- With the enhanced AI image generation model, users have even more control over their photo edits. They simply enter their desired description, and AI regenerates the image exactly how they want it. When they add an object, it seamlessly integrates with the original. It lets them transform their images into a variety of fun, unique styles with no editing skills required.

Creative Studio

- Creative Studio unlocks more creative possibilities than ever. Users can enter text prompts and choose a style to effortlessly create stunning images that match their style. It also recommends a wide range of templates perfectly suited to their taste, as well as context from wallpapers and stickers to invitation cards.

Now Nudge

- Galaxy S26 Series proactively offers AI assistance¹ in meaningful moments even before users ask. While users are texting, it understands the context and offers relevant actions, like opening their calendar, recalling conflicting schedules, or sharing photos with a tap. And when booking a flight or signing up, it securely auto-fills their personal details.

Nightography Video

- Galaxy S26 Series automatically adjusts in real time to keep what users capture clear and bright, so they never have to think about lighting or settings. The noise-reduction solution, powered by an advanced processor, analyzes and filters out unique noise patterns across each sensor.
