Quick Start

Nighthawk X4
AC3200 WiFi Cable Modem Router
Model C7500

Package Contents

1. Collect your Comcast XFINITY information.
   Collect your Comcast XFINITY account number, account
   phone number, and login information (your email
   address or user name and password).

2. Turn off existing modems and routers.
   If you are replacing a modem that is currently
   connected in your home, unplug the modem and plug
   the new cable modem into the same outlet.

3. Connect a coaxial cable.
   Use the coaxial cable that is
   provided by Comcast XFINITY
   to connect the cable port on
   the cable modem to a cable wall
   outlet.
   Make sure that the cable is
   tightly connected.

4. Connect the power adapter.
   Connect the power adapter to the modem router and plug the
   power adapter into an electrical outlet.
   When the startup is complete, the Power LED lights solid
   white. If the Power LED does not light, press the Power On/Off
   button.

5. Wait for the modem router to come online.
   When the modem router comes online, the Internet LED stops
   blinking and lights solid white.
   This process might take up to 10 minutes.

6. Connect a computer or mobile device to the modem router.
   To connect with WiFi, use the WiFi network name and
   password on the modem router label.
   To connect using a wired connection, use an Ethernet
   cable to connect a computer to an Ethernet port on the
   modem router.
   Reboot the computer.

7. Log in to the modem router.
   Launch a web browser and enter http://routerlogin.net
   or http://192.168.0.1 in the address field of the web
   browser.
   When prompted to log in, enter admin for the user name
   and password for the password, change the admin
   password, and enter security questions and answers.

8. Activate your Internet service.
   For information about how to activate your Internet service,
   see Activate Your Internet Service on the other side of this
   quick start guide.
Activate Your Internet Service

Activate your Internet service by using Comcast XFINITY’s self-activation process. If you are unable to self-activate your modem router, call Comcast XFINITY customer service. After you complete the setup, perform a speed test.

Before you start the self-activation process, collect the following information:

- **XFINITY account number**
- The phone number associated with your XFINITY account
- **XFINITY login information** (your email address or user name and password)
- **Modem router model number**, which is C7500
- **Modem router serial number**
- **Modem router MAC address**

Your modem router’s serial number and MAC address are on the modem router label.

To set up your Internet connection with Comcast XFINITY’s self-activation process:

1. Close all web browsers.
2. **Launch a web browser.**
   - You are redirected to the XFINITY self-activation page. If you are not redirected to the XFINITY self-activation page, visit http://www.comcast.com/activate.
3. Provide your XFINITY credentials and complete the self-activation process.
   - This process might take up to 15 minutes, during which the modem router reboots twice.

To perform a speed test for maximum Internet speed results, we recommend that you use a wired gigabit-capable laptop during the speed test.

To determine the accurate Internet speed, visit http://speedtest.xfinity.com/ and perform a speed test.

If your actual speed is lower than your subscribed speed, contact XFINITY.

Join the WiFi Network

To connect your computer or mobile device (such as a smartphone or gaming device) to your modem router’s WiFi network, you can use either the manual method or the Wi-Fi Protected Setup (WPS) method.

**Manual Method**

1. On your WiFi-enabled computer or mobile device, open the WiFi connection manager that manages your WiFi connections.
   - The WiFi connection manager scans for WiFi networks in your area.
2. Find and select your modem router’s WiFi network name (SSID).
   - The SSID is on the modem router label.
3. Enter the modem router’s password (or your custom password if you changed it) to connect.
   - The password is on the modem router label.
4. Repeat Step 1 through Step 3 to connect other WiFi-enabled computers or mobile devices.

**WPS Method**

For help with the WPS button on your computer or WiFi device, check the instructions or online help that came with that computer or WiFi device. Some older equipment cannot use WPS.

**Note:** WPS does not support WEP security. If you are using WEP security, use the manual method.

1. Press the WPS button on the modem router for three to five seconds.
2. Within two minutes, on your WPS-enabled device, press its WPS button or click its onscreen WPS button.
   - The WPS-enabled device connects to your modem router’s WiFi network.
3. Repeat this process to add other WPS-enabled devices to the network.

Support

Thank you for purchasing this NETGEAR product. You can visit www.netgear.com/support to register your product, get help, access the latest downloads and user manuals, and join our community. We recommend that you use only official NETGEAR support resources.

If you are experiencing trouble installing your modem router, contact NETGEAR at 1-866-866-8924.

For regulatory compliance information, visit http://www.netgear.com/about/regulatory/.

See the regulatory compliance document before connecting the power supply.

Customer-owned modem routers might not be compatible with certain cable networks. Check with your cable Internet provider to confirm that this NETGEAR modem router is allowed on your cable network.
