

## COX INTERNET

Whether you're a casual internet surfer or an online gamer, there's a speed just right for you. With access to super-fast in-home wifi, you can stream, surf and share on more devices from all over your home. Plus, there's a whole host of tools to make your internet experience friendlier, easier and more cutting edge.

## Panoramic Wifi®

## THE BEST WAY TO WIFI

Make sure all your speed reaches every inch of your home when you pair it with the coverage of Panoramic Wifi. Next-generation equipment and expert installation help drive out dead zones and ensure your internet experience is wall-to-wall fast on all of your devices.

The Panoramic Wifi gateway is designed for speed and performance. Both a modem and a wireless router, it broadcasts two signals, allowing you to access the best wifi coverage and speeds available.

### Expert Installation

Our technicians can assess the ways you use wifi and the needs of your home, then strategically set up your network for the best speed and performance.

## TAKE CONTROL WITH THE MY WIFI TOOL

Panoramic Wifi includes the My Wifi tool, which lets you feel at ease knowing everything with your network is working as it should.

- Create, view or change your network name and password.
- Change wireless security settings.
- Monitor connected devices.
- Broadcast or hide your network.

To start managing your wifi network, visit [cox.com/mywifi](https://cox.com/mywifi) or download the Cox Connect App.

## YOUR DEVICES AND GADGETS MATTER

Your smartphones, tablets and other wifi enabled devices all affect your internet experience. Older devices use older technology and operate more slowly, and can slow down your whole network. Fewer connected devices will also speed up your network.

### The Right Location

Placing your wifi modem or router in the best place is important to get the best experience on the greatest number of devices. For most homes, the ideal placement is near the main TV viewing area, where you are using wifi the most.

### Always Enjoy a Great Wifi Experience

Connect your devices to your in-home wifi network:

1. Find your wifi network name (SSID) and password for your modem on My Account or with the My Wifi Tool.
2. Make sure wifi is enabled on the wireless device you'd like to connect.
3. From your mobile device, select your wifi network from the list, and use your wifi password to sign in.
